

7 Days to Die – YouTube Integration Bot Instructions

Welcome to my custom **7 Days to Die YouTube Integration Bot**!

This bot allows viewers to interact with the game in real time, similar to Twitch Integration.

How You Earn and Use Points

- **Passive Gain:** While watching the stream, you earn **1 point every 10 seconds**.
- **Activity Requirement:** If you go **5 minutes** without sending a chat message, passive point gain pauses until you chat again.
- **Checking Points:** Type `!points` in chat to see your balance on an on-screen overlay (not in chat).
- **Using Points:** You can spend points on commands to help or hinder the streamers.
- **Bank Your Points:** Your points persist from one stream to the next so any unspent points won't go to waste.

Super Chats vs. Points

- **Super Chats:** You can send commands by donating via Super Chat. Prices are shown in USD; foreign currencies are converted automatically. If no commands are sent, points are purchased in 1:1 ratio (\$2.00 would equate to 200 points)
- **Points:** Works the same way as Super Chats, except your points are spent instead of money.
- **Overlay Difference:** Super Chat commands have a distinctive overlay appearance so everyone can see they came from a donation.

Patreons and Discord Roles

- **Patreon Membership:** Depending on tier of Patreon membership, you'll have a chance to gain **an additional point** every 10 seconds! For the four tiers of membership, the percent chances are respectively: *10%, 25%, 50%* and *100%*.
- **Discord Roles:** Upon reaching **Level 20** on the Discord server obtaining the role of **Infernal**, you will have a *25%* chance to gain **an additional point** every 10 seconds!
- **Both:** These bonuses are **additive!** So having a tier 2 Patreon Membership plus the Discord Infernal role will give you a *50% (25 + 25)* chance to gain an extra point.

Command Format

Commands are **not case-sensitive** and can appear anywhere in your chat message.

They must contain:

1. **An exclamation mark “!” must prefix the Command Keywords**

2. Command Keywords

3. Target Player (@eerie or @guru or @all or @random)

Example 1: !burn @eerie

Example 2: !trip @guru

Example 3: Hope this hurts! !Disable melee weapon @guru. Good luck!

Users can target eerie, guru, randomly between them, or both! If targeting @all for both players, the command point cost or the minimum price is 75% more. In other words, two commands at once for a fraction of the cost!

DO NOT mix commands or use unique key words from multiple commands in the same message! You may accidentally trigger the wrong command or no command at all. Executing multiple commands from one chat message is not currently supported.

Zombie Spawning Explained

When spawning zombies, here's how it works:

- The targeted player is hit with the **auto pull buff** which will periodically draw aggro from spawned zombies.
- Each spawn command pulls **random zombies** from a specific group.
- **Base Amount:** Most zombie groups spawn **15 zombies** by default. Boss-type zombies spawn fewer (often just 1).
- **Extra Zombies for Super Chats:** If your Super Chat exceeds the command's minimum price, you spawn **extra zombies**—the number depends on how much over the minimum you donate.
- Example:
 - Command: !spawn rad normal (Base: 3 zombies, Min: \$3, +1 zombie per \$0.50 over)
 - You donate \$3.00 → \$1 over minimum → 4 extra zombies → **19 zombies total**.
- The zombies are **randomly chosen** based on the group and their assigned probabilities in the bot's configuration.
- As **Game Stage** increases, base counts will also **increase**.

How the Bot Reads Chat

- Normally checks for new messages **every 5 seconds**.
- If no new chats for 5 minutes, the bot **slows down** and may take up to 60 seconds to process your command.
- Tip: During quiet periods, send some normal messages before sending a command to avoid delays.

If Something Goes Wrong

The bot is still a work in progress. If your command fails due to a bug, I will manually execute it in-game.
